

Underfitting and overfitting

02 July 2024

12:43

- **Overfitting:** capturing spurious patterns that won't recur in the future, leading to less accurate predictions
- **Underfitting:** failing to capture relevant patterns, again leading to less accurate predictions

We use **validation** data, which isn't used in model training, to measure a candidate model's performance. This lets us try many candidate models and keep the best one.

accurate predictions, or
ons.
el's accuracy. This
